

Vanquish Pro

ANT BAIT

Only for use in public and household areas.
Not for agricultural or horticultural use.

WARNING - Read label before use.
TOXIC TO FISH & AQUATIC ORGANISMS (9.1A)
TOXIC TO BEES (9.4C)

Active Ingredient: fipronil 0.1 g/kg in the form of a paste bait

Directions for use: Remove cartridge from vac bag. Cut tip from bait cartridge and place in dispensing unit. Squeeze small amounts of bait at regular intervals of 1.5-2.5 metres into cracks, crevices and shady places where Ants are seen. There may be variations in moisture content between cartridges. This will not alter the bait's attractiveness to ants nor its effectiveness. This product is a fresh bait made of natural ingredients without preservative. Therefore once the cartridge is opened use entire contents in one treatment and do not reseal. Dispose of any remaining bait in an approved way. Bait will take a few days to be effective. **DO NOT FLUSH DOWN SEWER OR ALLOW TO CONTAMINATE ANY WATER SUPPLY.**

Medium ant infestations, use one cartridge per 1100 square metres equivalent to 3kg/ha. **Heavy ant infestations,** use one cartridge per 550 square metres - equivalent to 6 kg/ha.

The extent and density of the ant population should be assessed before treatment so that the correct rate of bait is applied.

Repeat if ants re-invade the treated areas or after 12 months.

Broadcast application: This bait may be applied using a broadcast method with specialist application equipment. Refer to the manufacturer for specific details.

Warning: This substance may be harmful if swallowed or the dry dust inhaled. Do not lay bait within 400 metres of bee hives or on plants that bees frequent.

Precautions: Keep out of reach of children. Use immediately or store in a sealed container in a cool place out of direct sunlight or within a refrigerator in original container and separated from food or feed. It is advisable to wear rubber gloves when applying bait.

Disposal: Only dispose of contents in treatment areas. Crush and dispose of empty container by incineration, in an approved landfill or mixed with sufficient inert material (eg sand, rubble) to dilute any residue to a negligible level.

First Aid: If swallowed observe patient for signs of nervousness, excitability or agitation. Seek medical advice if these symptoms noted. There should not be any ill-effects from skin contamination. Remove and wash any contaminated clothing. If in eyes irrigate with plenty of water. If any irritation persists seek medical advice. If any doubt phone National Poisons Centre 0800 764 766.
